

Recommendation: standardise on Make

Lowest 12-month cost (Nov 2025 - Oct 2026): Make EUR 41,268, vs Zapier EUR 44,901, n8n EUR 45,600

How the numbers were built

- 568,666 business runs in Oct 2024 - Sep 2025 after de-duplicating export batches, removing retries, replays, tests, parallel-run mirrors, incident duplicates, helper sub-flow runs and scratch items, and mapping re-created ids by workflow name.
- Forward volume repeats the same calendar months, leaves out the two one-off bulk backfills, and excludes 4 churned clients (101 workflows in scope). Helper consumption is added to its parent.
- Zapier: starts on the 200,000 tasks/month plan (annual billing, 20% off) but the December peak exceeds 125% of allowance, so the contract moves the account up a plan from January. Make: 250,000 ops/month with overage, +14% from Jan 2026. n8n: 100,000 executions/month, sized to the busiest month (59,514).
- Migration: 66 workflows to Zapier (363 h), 56 to Make (402 h), 80 to n8n (896 h) at EUR 30/h.
- USD converted at EURUSD 1.124.

The margin over the runner-up is about 9%. n8n has the lowest subscription, so year-two economics may differ.
